

Research and Variety Development

Corteva Agriscience alfalfa products are developed using the largest, most robust alfalfa germplasm pool in the world together with enabling technologies powered by the Corteva innovation and research engine. Together, these advantages fuel industry-leading products with higher productivity, improved defensive traits, and high forage quality, creating more value for farmers year-over-year.

Quality Seed Production

By applying insights and science derived from our U.S.-based supply chain system, Corteva can bring alfalfa seed production expertise to local seed grower environments, ensuring top yields and quality. Customers can trust that they will have seed products backed by the world's largest team of seed production experts.

Customer Driven

Corteva is expanding access to our genetics, technology, and traits by going to market in the U.S through a strengthened and focused multi-channel, multi-brand strategy. Each brand will leverage these capabilities and assets to best meet the needs and buying preferences of their respective customer segments.

As the flagship brand, Pioneer's close connection to our customers is second to none. Pioneer will continue to provide growers a suite of exclusive alfalfa variety choices supported by the leading agronomy and nutritional sciences team in the industry.

Alforex and Dairyland brands will continue to offer a broad variety of conventional and traited technology choices to their alfalfa customers, including Hi-Gest® and hybrid conventional genetics.
